

We call it "smart design", something that combines form with maximum functionality, allows for the greatest compositional freedom, is built to last thanks to attention to detail, and meets the needs of a constantly evolving market.

# G40

## THE ESSENCE OF STRUCTURE

Every project begins with a line.  
In the case of G40, that line is a 40x40 mm metal profile: a simple, rigorous element that forms the foundation of a system designed to meet the demands of contemporary work.

G40 is a collection of desks that, combined with the modules of the Flexa shelving system, create furnishing solutions with virtually limitless design possibilities. Workstations, shared workstations, meeting tables, multifunctional tables, high versions for dynamic working and mobile solutions on castors all stem from a single design matrix, ensuring visual continuity and maximum compositional freedom.

Designed for offices, collaborative spaces and contract environments, G40 combines strength, ease of assembly and flexibility of use. An open system, capable of adapting to changing needs over time while maintaining its formal coherence.
